Abstrak

Penelitian ini merupakan penelitian dengan metode kuantitatif yang bertujuan untuk mengetahui hubungan antara pernikahan usia muda dengan riwayat reproduksi pada wanita usia subur di Provinsi Jawa Timur tahun 2013. Desain penelitian dengan cross sectional dan menggunakan data sekunder Improving Contraceptive Method Mix 2013. Hasil penelitian menunjukkan adanya hubungan signifikan antara pendidikan, penggunaan KB dan status ekonomi terhadap usia nikah pertama, namun tidak berhubungan antara pengambilan keputusan keluarga terhadap usia nikah pertama. Terdapat perbedaan rata-rata lama penundaan kehamilan pertama, rata-rata jumlah paritas terhadap usia nikah pertama, akan tetapi tidak ada perbedaan rata-rata jumlah abortus terhadap usia nikah pertama.

This is a quantitative research study which aim to know the association between early marriage with child bearing women's reproductive history in East Java on 2013. This research used crosssectional study design and the data was collected from secunder data's of Improving Contraceptive Method Mix 2013. The result showed that there was a significant associations between education, contraceptive use and economic status, toward first age of married. However, there were no association between decision maker in family toward first age of married. There are differences on rate of first pregnancy delayed and rate of parity toward first age of married. However, there are no different on rate of abortus event toward first age of married.
