Abstrak

Clinical Pathway di rumah sakit merupakan pedoman yang mencakup semua aktivitas dari pasien masuk hingga keluar rumah sakit. Tesis ini membahas mengenai pengaruh clinical pathway terhadap lama hari rawat dan biaya resep pasien di RS IMC. Penelitian ini adalah kualitatif dan kuantitatif dengan desain studi kasus analisis deskriptif. Hasil penelitian menggambarkan tahapan proses implementasi clinical pathway di RS IMC dimulai dengan perencanaan, pembentukan tim, penyusunan draft formulir clinical pathway, sosialisasi, uji coba hingga implementasi; serta terjadi penurunan lama hari rawat dan biaya resep pasien hernia inguinalis akibat pengaruh implementasi clinical pathway di RS IMC Bintaro. Kata kunci: Clinical pathway, lama hari rawat, biaya resep, hernia inguinalis

Clinical Pathway in the hospital is a guideline which includes all activities from admission until hospital discharge. This thesis discusses the effect of clinical pathways towards length of stay and cost of prescription patient in IMC hospital. This study is a qualitative and quantitative, analysis of a descriptive case study design. Results of the study illustrate the stages of the process of implementing clinical pathways in IMC Hospital that begins with planning, team building, clinical pathways form drafting, dissemination, trial and implementation; as well as a decline in length of stay and cost of prescription inguinal hernia patients due to the effect of the implementation of clinical pathways in IMC Hospital. Keyword: Clinical pathway, length of stay, prescription cost, inguinal hernia.
