Implementation of Kangaroo Mother Care By Mother Post Care in RSUD Koja North Jakarta 2017

ABSTRACT Kangaroo Mother Care (KMC) is a treatment which is given to low birth weight (LBW) by direct contact from mother skin to baby. RSUD Koja is one of government hospital who had implemented KMC since 2013. This aim of this study was to analyze the implementation of treatment of KMC by post-hospital treatment mother in hospital. This study used qualitative design, with Rapid Assessment Procedure approach from May to June. The informant of this study was mother who gave a birth <2200 gram, received education and practiced about KMC. The result of this study was mother's knowledge good about definition, benefits and position of KMC. Mother favorable easy use of KMC. Most decision maker was mother. Factor affect mothers received KMC are the role of health workers. Most mothers didn't routine implemented KMC in their home because of homework. Some mothers didn't come back for the second time medical check-up according to the schedule. Given education to mothers and families about the role of families to replace implementation KMC.
