Abstrak

Tesis ini membahas iklim keselamatan pada pekerja di industri minyak dan gas, data iklim keselamatan pekerja diperoleh melalui survei daring. Pengumpulan data menggunakan metode survei yang bersumber dari survei yang digunakan pada jurnal (Sunindijo et al. 2019) dan (Loosemore et al. 2019) yang sudah digunakan pada industri lainnya yaitu industri bangunan, infrastruktur, konstruksi di Indonesia dan Australia. Survei dilakukan terhadap karyawan dan partner di industri minyak dan gas, hasil penelitian menunjukkan terdapat perbedaan signifikan pada beberapa bagian antara karyawan dan partner, dan antara pekerja industri minyak dan gas dan pekerja industri lainnya. Dapat disimpulkan bahwa iklim keselamatan di industri migas sudah baik dan secara rerata lebih tinggi dari industri konstruksi, dimana di sisi positif pekerja industri migas merasa lingkungan kerjanya aman untuk bekerja, namun di sisi lain memerlukan perbaikan dalam implementasi peraturan dan prosedur keselamatan di tempat kerja.

The focus of this thesis is safety climate on oil and gas industry worker, the objective is to analyze safety climate in oil & gas industry and compare it with construction industry. Data collection is performed using a survei method which sourced from journal (Sunindijo et al. 2019) and (Loosemore et al. 2019) which already used in other industry such as building, infrastructure, construction in Indonesia and Australia. Safety climate data is obtained through online survei. Survei performed to employees and partners in oil and gas industry, this study shows that there is a significant difference on some part of employees and partners, and between oil and gas worker and construction industry worker. We can conclude that safety climate in oil & gas industry is already good and in average has higher value than construction industry, where on the positif side oil & gas industry worker feels their work environment is safe to work ,but need some improvement in safety rules and procedures implementation at work.
